

Personal Project Presentation

Spaceship over London Sky

I would like to further improve my special effects compositing skills through this project. First, I will adjust and modify some 3D assets of spaceships collected. Next, I will use drones to shoot some aerial videos of London or some other places, and then compositing the model in Maya into the video through camera tracking. The overall style can probably refer to the style of the *District 9* (2009).
